

Himanshu Menghani

Full Stack Developer & AI Engineer

📍 Mumbai, India — 📞 +91 77699 49282 — ✉ himanshumenghani524@gmail.com —  linkedin.com/in/himanshumenghani524 —  github.com/524himanshu —  Portfolio

Summary

Full-stack Developer and AI Engineer with hands-on experience building and deploying production-ready web and AI systems using **React, Next.js, FastAPI, Django, Python, and PostgreSQL**. Built **3+ end-to-end projects** involving AI integrations, role-based systems, asynchronous workflows, and scalable backend architectures. Developed **DrishtiAI**, a real-time adverse event detection platform shortlisted at **AI for Bharat 2026**, leveraging FastAPI, Next.js, Redis, PostgreSQL, and scispaCy. Experienced in **REST API development, LLM integrations (Gemini, Claude, Llama 3.3), Agentic AI systems, RAG pipelines, Celery, and Redis**. Built a **payout processing system using Django, DRF, Celery, and Redis** with background job processing and transactional workflows. Focused on designing reliable, scalable, and production-ready systems from development to deployment.

Technical Skills

Languages: JavaScript, Python, SQL

Frontend: React.js, Next.js, Tailwind CSS

Backend: Node.js, Express.js, Flask, Django, Django REST Framework, REST APIs, JWT Authentication, Celery, Redis

Databases: MongoDB, PostgreSQL

Tools & Platforms: Redis, Docker, Git, Postman, Vercel, Render, Cloudflare Workers

AI/ML: LLM Integrations (Gemini, Claude, Llama 3.3), Scikit-learn, Pandas, NumPy

Concepts: RBAC, Async Processing, API Design

Projects

Playto Payout Engine | *Django, DRF, PostgreSQL, Celery, Redis, React*

 [GitHub](#)  [Live Demo](#)

- Built an **asynchronous payout processing system** using **Celery and Redis**, offloading long-running payout tasks from request-response cycle
- Implemented **background job queues with retry logic** to handle payout failures and ensure reliable task execution
- Designed **PostgreSQL transactional workflows** to maintain data consistency and prevent duplicate or failed payouts
- Integrated **HubSpot API** to sync payout and user data with external CRM workflows, handling API responses and failure scenarios
- Developed **REST APIs using Django REST Framework** for payout initiation, status tracking, and admin operations
- Built **RBAC-based dashboards** enabling real-time payout monitoring for admins and end users

AI Health Diagnostics Platform | *Next.js, Flask, Python, MongoDB, Gemini API*

 [GitHub](#)  [Live Demo](#)

- Built and deployed a production-grade full-stack AI platform spanning **3+ core features**: symptom analysis, medical report processing, and AI-generated diagnostics, live across **2 cloud environments** (Vercel + Render).
- Architected and implemented **5+ RESTful APIs** using Flask, covering report ingestion, input validation, data sanitization, and Gemini API response orchestration, handling **100% of backend data flow** independently.
- Designed a **decoupled microservice-style architecture** with independently deployed frontend and backend services, enabling zero-downtime updates and isolated scaling per service.
- Engineered secure file upload pipelines supporting PDFs and images with **multi-layer validation**, encrypted data transmission, and graceful error recovery across **2 deployment environments**.
- Managed the **complete SDLC**: requirements gathering, system design, API development, cross-service integration testing, and cloud deployment, shipped solo end-to-end.

CF AI Career Coach | *Cloudflare Workers, Workers AI (Llama 3.3), Durable Objects, JavaScript*

 [GitHub](#)  [Live Demo](#)

- Built and deployed a **serverless AI career coaching chatbot** on Cloudflare Workers using **Llama 3.3 70B (Workers AI)** to analyze resumes, score candidates, and generate role-specific feedback
- Designed **structured prompts** to control LLM output, generating consistent responses including resume score, strengths, gaps, and actionable improvements
- Implemented **persistent multi-turn conversation memory** using Durable Objects, maintaining chat history and user context without a traditional database
- Architected a **stateless Worker routing layer** with **3 endpoints** (/start, /chat, /clear), handling CORS and structured JSON responses
- Developed and deployed a frontend chat interface using **Cloudflare Assets**, enabling users to submit resumes and receive instant AI-driven feedback

- Built an end-to-end ML pipeline from raw data ingestion and preprocessing to model training, evaluation, and live deployment, classifying Parkinson’s disease from **22 biomedical voice features**.
- Benchmarked **3 algorithms** (SVM, Logistic Regression, Random Forest) via **5-fold cross-validation**, selecting **Random Forest** with class-balanced training achieving **94.87% test accuracy** on a held-out validation set.
- Performed feature engineering, correlation analysis, and hyperparameter tuning across `n_estimators`, `max_depth`, and `class_weight` to optimize classifier performance.
- Deployed a multi-page Streamlit interface with real-time prediction, correlation heatmaps, confusion matrix, and a decision tree explorer, reducing manual evaluation time by **~80%** compared to script-based testing.

- Built a **real-time pharmacovigilance platform** ingesting Twitter and Reddit data to detect adverse drug events using **scispaCy NLP pipelines** and **SHAP-based explainability**.
- Architected a **full NLP pipeline** covering entity extraction, signal classification, and confidence scoring across live social media streams with sub-second processing.
- Designed **PostgreSQL schema** for structured signal storage with Redis-backed caching for low-latency dashboard queries.
- Implemented **Presidio-based PII redaction** to anonymize patient data before storage, ensuring privacy compliance across all ingested content.
- Deployed end-to-end on **Railway** using Docker Compose, with a **Next.js dashboard** for real-time signal monitoring and filtering. Shortlisted at **AI for Bharat 2026**.

Professional Experience

- Delivered **3+ responsive web pages** and a full task management application with prioritization, deadline tracking, and status management, completed all deliverables within the **2-month internship timeline**.
- Improved UI responsiveness across multiple devices using **structured component design**, enforcing clean component architecture and consistent cross-browser styling.
- Assisted in **debugging and resolving frontend rendering issues**

Education

Bachelor of Engineering, Information Technology Mumbai University	<i>2021 – 2024</i>
Higher Secondary Certificate (Science) 80% Maharashtra State Board	<i>2020 – 2021</i>
Secondary Education (10th Grade) Maharashtra State Board	<i>2018 – 2019</i>

Certifications & Achievements

- **Develop GenAI Apps with Gemini and Streamlit** — Google Cloud
- **Introduction to Generative AI** — Google
- **Prompt Design in Vertex AI** — Google
- **INVICTUS’24 Hackathon** — QuestIT Cell × ISTE VESIT
- **AI for Bharat 2026** — Shortlisted, Prototype Phase (DrishtiAI)
- **27 total certifications** across Cloud, AI & Web Development — [View on LinkedIn](#)
